Investigation :

To Whom It May Concern

This letter is in support of Rotary International Global Grant 2118639, which seeks to increase the ability to deliver surgical care to patients with neglected foot and ankle conditions in Agra. The Doctors of Centre for Trauma And Joint Replacement had participated in a community assessment of need for the described surgical care in connection with a prior Rotary global grant in 2017 and 2018 involving US foot and ankle specialist Dr. Bhavesh Shah. India is largely a cash-based medical community, resulting in many patients being left with untreated or residual deformities, including those of the foot and ankle.

To alleviate this situation, Drs. Ankit and Nimta Varshneya have donated the use of their hospital in Agra, and Dr. Shah has engaged his surgical group (Operation Footprint) to collaborate with Dr. Ankit Varshneya on a voluntary basis at Centre For Trauma And Joint Replacement in performing surgeries and enabling the facility to increase its ability to deliver future surgical care on targeted, needy patients, with birth defects and neurologic defects affecting the foot and ankle.

Based upon increasing numbers of successful surgeries observed through this arrangement, such a program, with additional development, will benefit the community as a whole and brings the potential for expansion of this model elsewhere in India. During the surgical camp resident doctors from near by medical colleges will be coming to help and assist i the camp which in one way help to transfer the knowledge and make them more trained in foot and ankle surgeries.
